EDUCATION

Georgia Institute of Technology

Masters of Science, Computer Science

- 4.0/4.0 GPA

January 2025 - Present

Atlanta, GA

University of California, Santa Cruz

Bachelor of Arts, Computer Science

2023

Santa Cruz, CA

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Python, HTML/CSS, Swift, SQL, C, C++

Skills: Full-Stack, Front-End, CI/CD, Database Management, API, Artificial Intelligence, User Research, LLMs, Agile, Scrum

Tools: React, Node.js/Express.js, Django, MongoDB, Docker, PostgreSQL, Jenkins, AWS, Jest, Mocha, Git, GitHub, OpenAI, Jira, Excel

EXPERIENCES

SF Civic Tech

Open-Source Full Stack Developer

June 2022 – Present

San Francisco, CA

- Developed and maintained high-quality web applications using React, Node.js, and PostgreSQL
- Designed database schemas and built RESTful APIs using Node.js to integrate with front-end applications
- Wrote comprehensive unit and integration tests using Node.js testing, achieving >80% test coverage
- Collaborated with UI/UX designers to translate UI/UX wireframes into functional code
- Implemented responsive design practices to ensure optimal user experience across devices

Tech4Good Lab, UCSC

Lead Software Developer

March 2022 – August 2023

Santa Cruz, CA

- Utilized Angular, NgRx and RxJS to create web applications that asynchronously retrieve, store and manipulate data stored in Cloud Firestore
- Led multiple development team of over 10 developers in an Agile environment, managing project timelines and deliverables
- Spearheaded lab-wide accessibility initiatives by establishing best practice documentation and accessibility checklists for developers

ChargePoint

Software Engineer Intern

February 2023 – June 2023

Campbell, CA

- Implemented industry-standard software testing techniques with Jenkins and Python, improving testing productivity by 70%
- Developed an automated regression testing system for electric vehicle charging products, enhancing performance validation and reducing potential software regressions during active development
- Enhanced internal Python framework to generate JUnit-XML test reports with Jenkins, facilitating clear visualization of test outcomes

PROJECTS

SF Lifeline | React, Vite, Fastify, Storybook, Mantine

March 2024 – Present

Web-based app to enhance streamline communication process between patients and first responders during emergencies

- Implemented user authentication processes allowing for user registration through admin approval or by invitations
- Formulated seeding scripts to pull large datasets from different medical API services to load into database using PostgreSQL
- Achieved >80% coverage on back-end APIs with unit testing using Node.js testing library

Support SFUSD | Next.js, React, TypeScript, Prisma, Tailwind CSS, HTML

January 2024 – August 2024

Web application to host resources about SFUSD schools and opportunities for supporters to contribute to

- Built responsive UI components and optimized database schemas with Prisma to ensure efficient data flow

MapRoulette | React, JavaScript, CSS, Node.js

September 2022 – September 2023

Web-based platform that provides microtasks for users to contribute in mapping the map database of OpenStreetMap

- Built a database admin analytics tool analyzing 10,000+ data points, providing insights into user behavior and website performance
- Integrated with GitHub API to enable issue reporting capabilities, facilitating direct users to developers communication

SF Ready Meals | React, Express, Sequelize, PostgreSQL, Heroku

June 2022 – February 2023

Full-stack application providing details about the SFHSA Congregate Meals Program and maps participating organizations

- Engineered CRUD back-end APIs and integrated with fully responsive front-end built with React and Bootstrap
- Implemented features such as filterable map/list view, user authentication, and language internationalization.
